# THE BOSMERE MEDICAL PRACTICE

**Bosmere Medical Centre, Solent Road, Havant, Hampshire, PO9 1DQ**
**Tel 02392 476941**

| Study Title | Study Design | Study Objective |
|---|---|---|
| **ACT-UP study** (Oxford University) | **A C**luster **T**rial to increase **UP**take of the NHS Diabetes Prevention Programme (DPP) in women with a history of Gestational Diabetes Mellitus (GDM). | In women with a history of GDM, do text message reminders changes uptake of the DPP, compared with current standard practice? |
| **COMPUTATIONAL trial** (Liverpool University) | A primary care-based cluster randomised trial of personalised renal function monitoring and interventions in people living with heart failure. | The COMPUTATIONAL trial will explore the clinical and cost-effectiveness of a personalised renal function monitoring algorithm, designed to prevent hospital admissions due to renal impairment without worsening heart failure outcomes. |
| **CLEAR study** (University of the West of England) | Increasing engagement and improving patient experience of **C**ervica**L** scr**E**ening in prim**AR**y care: Implementing the left lateral test position. A realist evaluation and implementation study. | To implement a cervical screening programme that provides patients a choice of test positions. |
| **DaRe2THINK trial** (Birmingham University) | The use of healthcare **Da**ta for pragmatic **Re**search (primary **2** secondary care) to prevent stroke, cognitive decline and premature death in a younger community of patients with atrial fibrillation. Randomised controlled trial. | Does the use of direct oral anticoagulants in younger patients with atrial fibrillation reduce their risk of cognitive decline, stroke and premature death? |
| **Discover Me** (Omnigen Biodata) | Discover Me is a nationwide research study looking at how health and genetic information can allow us to better understand disease. If interested in participating, please enrol here. | When participating in Discover Me you can learn more about your own health, thereby supporting you and your doctor in making better decisions about your health and future care. |
| **PAPA trial** (Southampton University) | **P**reventing childhood **A**sthma using **P**rophylactic house dust mite **A**llergen immunotherapy. Randomised placebo-controlled clinical trial. | To establish efficacy and safety of house dust mite sublingual Immunotherapy (HDM-SLIT) by comparing Acarizax and placebo, when given sublingually for 3 years to high risk infants aged between 5 to 12 months at |
